

Press Release

Projekt Solartechnik for Formika Green Energy

Tomaszów Mazowiecki, September 19, 2022 - The Projekt Solartechnik (PST) company will supply five solar power plants for Formika Green Energy. The purchase of a photovoltaic farm by a company is one of the ways to ensure a long-term supply of electricity at a fixed price.

The cooperation initiated by Projekt Solartechnik with Formika Green Energy involves construction and commissioning of five solar energy plants. The installations will be built in Kownacica, Sobolew and Tarnogród Wieś. The total total capacity of the projects is approx 5 MWp.

- Investing in own, renewable energy sources is a solution that quickly and effectively reduces costs for the company. With the current and forecast electricity prices, the payback period is record-breaking, says Krzysztof Czajka, vice-president for sales at Projekt Solartechnik. - We are happy with the cooperation we have started. We will build and commission five solar power plants at the same time. At this time next year, Formika Green Energy will already be using it from green energy - he adds.

The specialists of Projekt Solartechnik are responsible for the comprehensive process, from the implementation of construction projects for the installation, through their implementation, and energy generation of farms, to the conclusion of a contract for the distribution and sale of electricity for a given power plant.

- Investing in our own solar power plants will enable the production of packaging exclusively from green energy, which will have a positive impact on the environment and is fully in line with the sustainable development strategy announced by us in the beginning of this year. Moreover, thanks to our own energy, our production costs will be more predictable. It will allow to plan expenses in a better way both for us and our clients - says Piotr Dębicki, CEO of Formika Sp. z o.o. and Formika Green Energy Sp. z o.o.

Projekt Solartechnik specializes in large-scale photovoltaic installations, wind farms, PV solutions for business and the sale of ready-made solar power plants. The company, present on the European RES market since 2006, has experience in construction and development and management of solar

farms in Poland, England, Belgium, France, Germany, Romania and Hungary. At the end of the second quarter of this year. PV project portfolio Solartechnik project exceeded 2.1 GW.

Projekt Solartechnik is a company with several years of experience gained on European markets. She built solar power plants, incl. in England, Belgium, France, Germany, Romania and Hungary. In Poland, present since 2011, specializes in photovoltaic projects and industrial energy and wind farms. From May 2021, it is part of the FAMUR Group and TDJ.
